

KAREN BYRNE

Graduated from Scoil Uí Mhuirí
2014

My name is Karen Byrne, I'm nineteen years old, and currently in my third year of studying biological and biomedical science in Maynooth University. Biological and biomedical science involves studying Life Science subjects related to human health and disease. So I have been learning about the structure and function of the human body from a molecular level and on a tissue or organ level. I learn how diseases, genetic disorders, and environmental conditions effect the human body, and how they can be diagnosed and treated. There are a lot of job prospects by gaining a degree in biological and biomedical science, I will have the opportunity to work in hospital research laboratories. I can also work in pharmaceutical industry, actively working to produce medicine to help save lives. I have always had an interest in biology, and attending college at Maynooth University has really helped me to ensure that I will achieve a career in an area of personal interest to me!
